SUMMARY

Technology transformation and consulting leader with 35+ years of experience helping complex organizations modernize applications, adopt cloud technologies, integrate enterprise systems, and improve technology delivery. Combines deep software engineering and architecture expertise with client consulting, technical leadership, stakeholder alignment, and hands-on implementation experience. 18 years at Fiserv delivering technology solutions for high-volume payment, billing, and money-movement platforms used by thousands of financial institutions, followed by technology leadership at AXIS Capital and Rightpoint across financial services, insurance, healthcare, retail, entertainment, and digital commerce. Translates business objectives into practical technology strategies and guides teams from requirements and solution design through implementation and delivery.

CORE EXPERTISE

Technology Transformation • Digital Transformation • Client & Stakeholder Consulting • Technology Strategy & Roadmaps • Application Modernization • Implementation & Technical Delivery • Technical Leadership & Team Mentoring • Business-to-Technology Translation • Enterprise Architecture • Solutions Architecture • Cloud Adoption & Modernization • API & Integration Architecture • Distributed Systems & Microservices • Technical Problem Solving

TECHNICAL SKILLS

Architecture & Strategy: Enterprise Architecture, Solutions Architecture, Technology Strategy, Application Modernization, Cloud Architecture, Distributed Systems, Architecture Roadmaps

Cloud & Infrastructure: Microsoft Azure, Azure Kubernetes Service (AKS), Azure VMs, AWS Lambda, Cloud-Native Architecture, CI/CD, Observability
Integration & APIs: REST APIs, .NET Web APIs, API Architecture, Integration Architecture, Azure Service Bus, Event-Driven Architecture, Microservices, SOA

Application & Data: .NET, C#, ASP.NET, Java, JavaScript, HTML, SQL Server, Oracle, Informix, Mainframe/iSeries Integration

Engineering Practices: Legacy Modernization, Strangler Fig Pattern, Reference Architectures, Integration Patterns, Technical Standards, Performance Optimization, Distributed Tracing, DevOps

PROFESSIONAL EXPERIENCE

Independent Technology Consultant & Advisor

Self-employed | Leesburg, GA | Dec 2025 – Apr 2026

- Explored emerging and evolving technologies through hands-on learning and experimentation, including GenAI, agentic AI, cloud-native architectures, and modern software engineering practices, with a focus on practical enterprise applications.
- Applied 35+ years of software engineering and architecture experience to assess technology approaches, architectural patterns, and modernization strategies while evaluating how emerging technologies could be applied to enterprise environments.
- Provided independent technology research and advisory support while pursuing opportunities in Solutions Architecture, technology transformation, consulting, and related technology leadership roles.

Rightpoint Consulting

Solutions Architect | Digital Operations Architecture | Remote | Jan 2020 – Nov 2025

- Consulted with enterprise clients across healthcare, financial services, entertainment, retail, and ecommerce on digital transformation, application modernization, cloud adoption, and integration initiatives.
- Partnered with business and technology stakeholders to translate business objectives into practical technology solutions, establish technical direction, and develop delivery plans.
- Led solution design and implementation guidance for payment and integration workflows using .NET Web APIs, Azure Service Bus, and AWS Lambda.
- Designed and guided cloud deployment and delivery approaches across Azure Kubernetes Service (AKS), Azure VMs, and serverless platforms, including CI/CD and observability.
- Established API specifications, integration contracts, reference architectures, and reusable technical patterns to improve consistency and quality across engineering teams.
- Diagnosed and resolved complex application, API, data, and cloud issues using logging, metrics, distributed tracing, and telemetry to improve reliability and performance.
- Provided technical leadership and mentoring to engineering and QA teams, strengthening implementation practices, technical quality, troubleshooting, and delivery.

AXIS Capital

Application Delivery Lead | Enterprise Architecture | Alpharetta, GA | Mar 2018 – Dec 2019

- Led technology delivery for enterprise initiatives, translating business requirements into application and integration solutions aligned with enterprise standards and technology strategy.
- Led application modernization initiatives across distributed teams, guiding efforts from requirements and solution design through implementation and deployment.
- Established development and delivery practices that improved consistency, maintainability, reliability, and quality across enterprise applications.
- Built automation tooling to streamline deployment, testing, and engineering workflows.
- Served as technical lead and Scrum Master, coordinating distributed teams and facilitating communication between technical and business stakeholders.
- Resolved complex application, integration, database, and infrastructure challenges using deep hands-on technical expertise.

Fiserv

18-year progression through technology architecture and engineering leadership roles | Alpharetta, GA | Dec 1999 – Feb 2018

- Led technology modernization, engineering, and delivery initiatives for high-volume payment, billing, and money-movement platforms serving thousands of financial institutions.

Principal Solutions Architect | Aug 2014 – Feb 2018

- Defined a three-year business and technology roadmap for the CheckFreePay division, aligning technology investments with business strategy.
- Led modernization of the Walk-In Payments platform, migrating legacy Informix and Unix systems to modern .NET and SQL Server architectures and improving performance by 30%.
- Applied the Strangler Fig approach to incrementally modernize legacy workflows, decomposing functionality into domain-aligned services while supporting continued business operations.
- Designed barcode-based POS payment workflows and supporting .NET Web Service APIs, translating business requirements into scalable technology solutions.
- Established PCI-aligned architecture and audit-ready operational controls for payment platforms

Manager & Lead Senior Software Architect | Mar 2012 – Jul 2014

- Led multi-team modernization initiatives and delivery of a unified .NET Web Service API layer across .NET and Java products.
- Managed the Biller Solutions architecture team, including hiring, coaching, and performance evaluation.
- Established architecture roadmaps, integration patterns, and technical standards aligned with business strategy.
- Mentored senior engineers and strengthened architectural capabilities across the organization.

Senior Software Architect | Sep 2008 – Feb 2012

- Delivered the eBill Easy Activation platform, increasing activations by 230%.
- Designed cross-platform authentication architecture that reduced digital certificates from hundreds to one.
- Architected SaaS APIs supporting more than 4,000 financial sponsors, including Bank of America.
- Designed distributed services and integration patterns across .NET, Java, and Oracle environments.

Software Architect | Jul 2001 – Aug 2008

- Designed Java and ASP.NET payment solutions, several of which were commercialized or sold to third parties.
- Designed Java biller-direct payment platforms integrating iSeries and mainframe systems.
- Co-designed .NET-based SOA capabilities exposing mainframe payment and billing functionality.
- Provided technical design and implementation guidance across distributed and legacy systems.

Senior Software Engineer | Dec 1999 – Jun 2001

- Developed core payment and billing platform components supporting high-volume financial workflows.
- Contributed to distributed system design, integration patterns, performance optimization, and secure application development.

RIB Software

Senior Software Engineer | Atlanta, GA | Jul 1991 – Nov 1999

- Developed commercial construction software and enterprise applications, progressing into increasingly complex application development and integration work.
- Designed and delivered custom integrations and application enhancements for enterprise clients.
- Improved application performance, reliability, and functionality through software design, development, and implementation.
- Contributed to modernization of legacy application components as business and technology requirements evolved.

Sales Technologies

Software Engineer | Buckhead, GA | Jul 1990 – Jul 1991

- Developed enterprise sales-force automation software using C++ and Oracle, supporting production applications and evolving business requirements.
- Supported production delivery and application enhancements across the software development lifecycle.

Universal Microsystems, Inc.

Software Engineer | Peachtree Corners, GA | Jul 1987 – Jun 1990

- Developed custom business applications for accounting, inventory, and operational functions using Clipper and dBase III.
- Supported the software development lifecycle from requirements and design through implementation and deployment.

EDUCATION

Master of Science, Computer Information Systems – Georgia State University

Bachelor of Business Administration, Computer Information Systems – Georgia State University

CERTIFICATIONS

Sitecore Experience Solution 9 Developer – Aug 2020
